# The Alabama Climate Report

Brought to you by the Office of the Alabama Climatologist

# **MAY 2022**

## *Volume 14, Number 2 :: May 2022*

Alabama saw its fair share of active weather for the month of May. A significant weather event (hail, wind damage, and/or tornadoes) was reported on 20 out of the 31 days. Fortunately, there were only four reported tornadoes with no injuries or fatalities.

Temperature-wise, the state was warmer than normal at 2.9°F above the long-term average of 70.7°F. Statewide, Alabama recorded its 14th warmest May, where Mobile and Birmingham recorded their warmest and 3rd warmest May on record, respectively. The warmest location of the month is a tie between a station in Talladega and the Andalusia-Opp airport at 97°F. In contrast, during a cold snap from the 7th through the 9th, the Russellville 4 SSE station recorded the coldest temperature of the month at 43°F on the 8th.

Rainfall was slightly above the long-term average of 4.24 inches by 0.78 inches. However, precipitation varied greatly across the state. Generally, areas around Birmingham and north were drier than normal, with a station in Fairfield, AL recording the driest location of the month at 1.76 inches of rainfall. Areas south of Birmingham, generally, were wetter than normal with the Mobile 1.2 WSW station recording the most rainfall of the month at 12.10 inches.

With the conclusion of climatological spring (March, April, May), let's look back at how Alabama faired this spring. Statewide, this spring was the 23rd warmest spring on record, with an average temperature of 64.6°F, which is 1.7°F warmer than normal. Precipitationwise, this spring was 26th wettest spring on record, with 17.74 inches of precipitation, which is 2.53 inches wetter than normal. From a tornado perspective it was an active spring with 56 tornadoes which is well above the long-term spring average of 16. Looking ahead into summer, the Climate Prediction Center (CPC) forecasts Alabama as 40-50% chance for above normal seasonal average temperatures. The precipitation is a bit varied with forecasts for equal chances in the northern part, 33-40% chance above normal in the central part, and 40-50% chance above normal in the southern part of Alabama. The following tables provide the normals for Alabama and the four major metropolitan areas relative to the 1991-2020 reference period for each summer month.

Monthly summaries are provided by Drs. Rob Junod and John Christy.

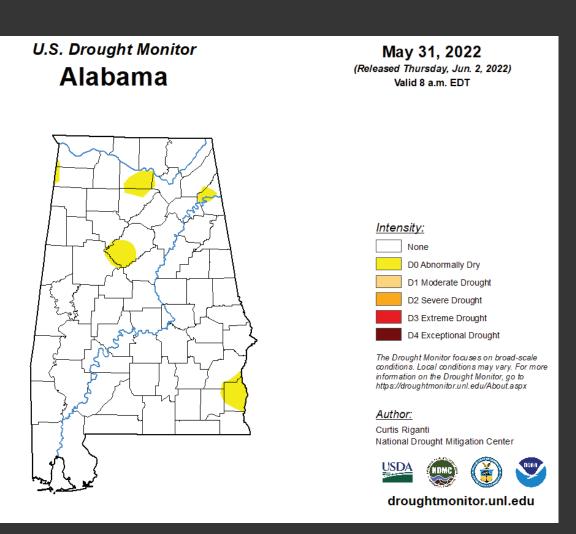

June									
	Mean	Average Daily High	Average Daily Low	Total
