

Alabama Climate Report

Vol. 1, No. 4 Alabama Office of State Climatologist

The University of Alabama in Huntsville

January 2011

Snow was the newsmaker again in January 2011 for the northern half of the state. While the event was not an all-time record-breaker for snowfall, 6 to 9 inch amounts were common and it was in the top 5 in many locations north of Birmingham.

One interesting note is that the ground in Huntsville was covered by at least one inch of snow for eight days — the longest continuous period on record.

At the same time, locations south of I-20 continue to limp along with less than adequate precipitation despite a Jan. 1-2 storm that dropped between one and five inches of rain over most of the state.

The dry area in east central Alabama continues to see its rainfall

Colder than 'normal'	Dec 2009, 2010 (°F)	Jan 2010, 2011 (°F)	Feb 2010 (°F)
Huntsville	-0.6, -4.9	-2.9, -2.5	-6.1
Muscle Shoals	-1.4, -4.8	-3.8, -2.5	-6.9
Anniston	-2.6, -7.6	-5.3, -3.9	-8.0
Birmingham	-1.4, -7.6	-3.7, -2.4	-6.9
Tuscaloosa	-2.4, -5.7	-5.0, -3.8	-8.0
Auburn*	-3.6, -7.1	-7.5, -6.0	-9.2
Montgomery	-2.8, -6.0	-4.9, -3.6	-7.9
Thomasville*	-2.8, -6.0	-5.3, -3.4	-7.9
Dothan*	-2.2, -7.8	-6.2, -5.9	-9.0
Mobile	-1.9, -5.1	-4.0, -2.0	-7.9

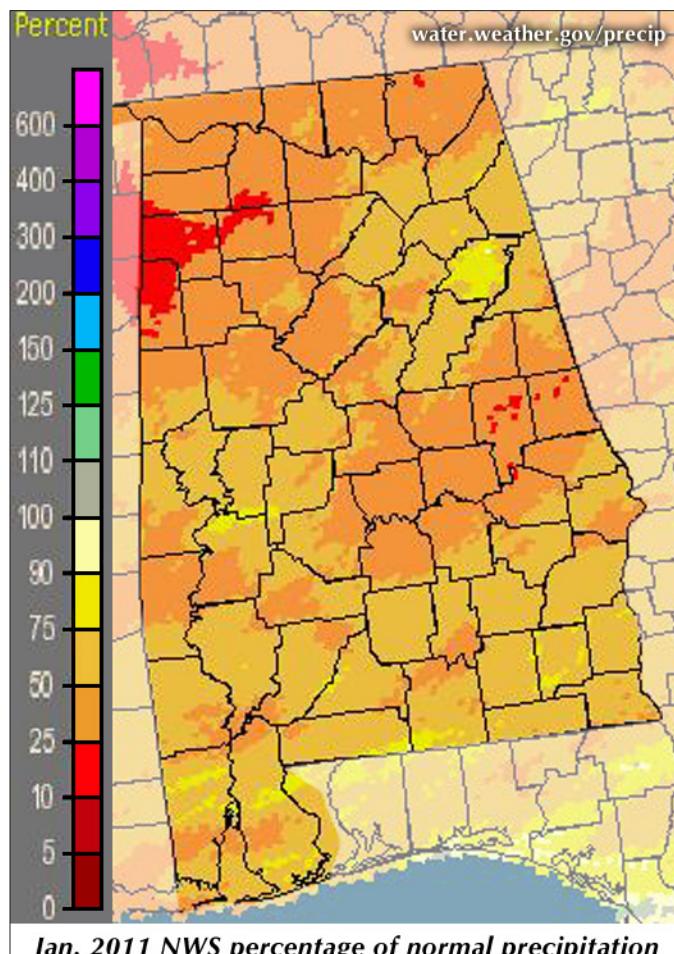

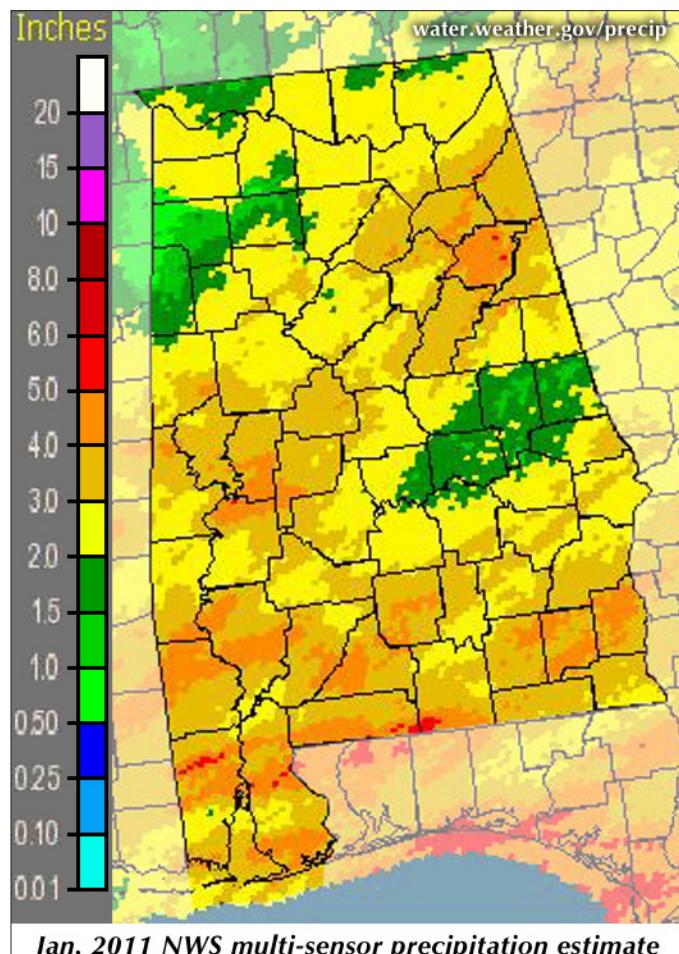

*Normal based on entire period of record (up to 110 years). Other stations based on 1971-2000 as "normal." Since the entire period's temperature on average was warmer than 1971-2000, these three station's current departures appear colder than the others.

deficit rise. The general rule is that when winter temperatures are below average, so too is precipitation.

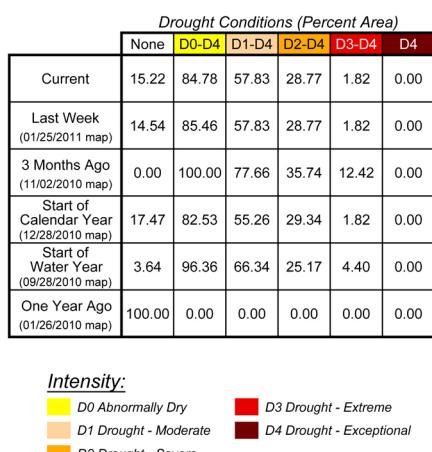

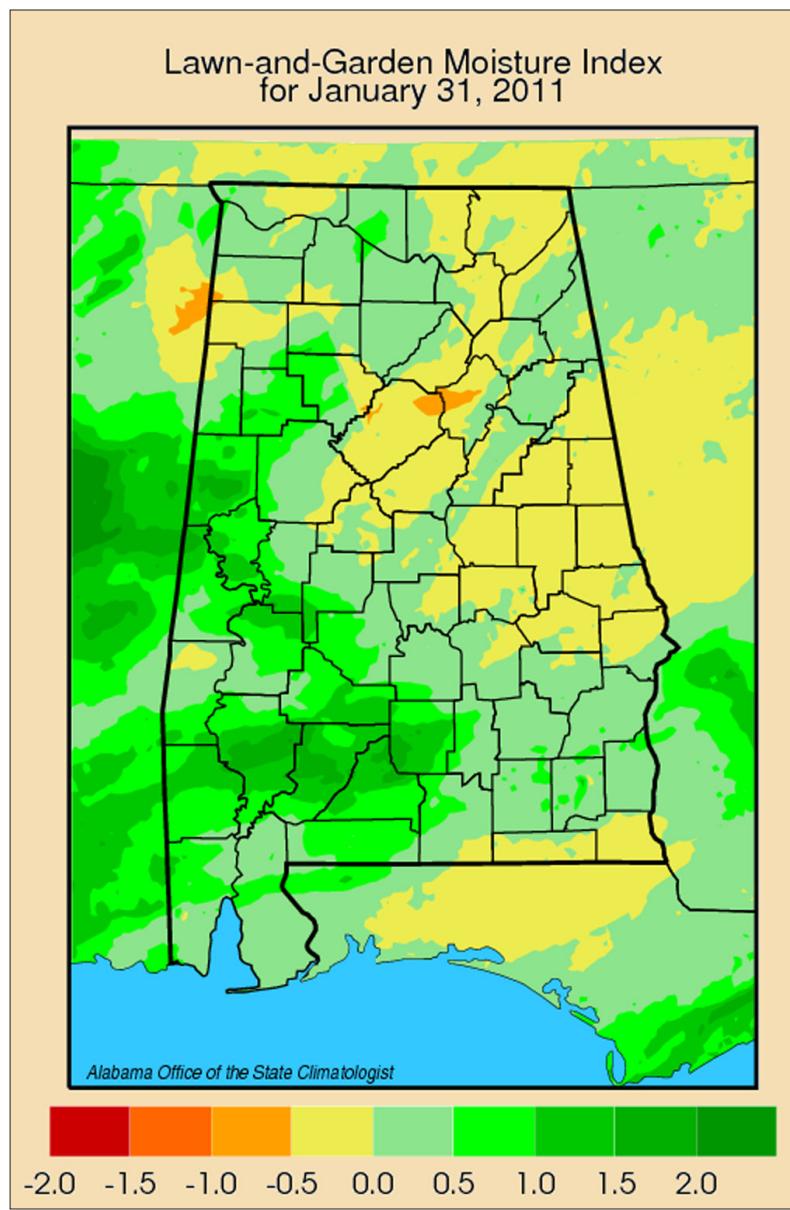

Arctic air sent temperatures downward in January, to as low as 2° F in Decatur and single digits in many

other locations. It was 21° F in Mobile on the 13th, one of their 6 days with a "hard freeze" (temperatures below 29° F) for January; Mobile had seven hard freeze days in December.

Continued on page 2

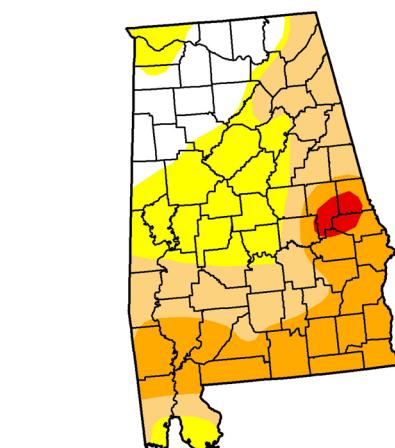

The lawn-and-garden moisture index measures the capacity of current soil moisture to sustain healthy lawns and gardens. The index is computed by estimating how much precipitation in the past three weeks contributes to current soil moisture. That rainfall is compared to a "standard" amount of rainfall considered to be adequate for that time of year to sustain healthy lawns and gardens. The difference is the lawn-and-garden moisture index.

U.S. Drought Monitor Alabama

<http://drought.unl.edu/dm>

USDA National Drought Mitigation Center **NOAA**

Released Thursday, February 3, 2011
R. Heim/L. Love-Brotak, NCDC/NOAA

For an average winter season, Mobile sees 22 days with temperatures at or below freezing (32° F). With February and March yet to go, they've already seen 24.

January's temperature as a whole was cooler than normal. That, coupled with the same story for December, has made for a chilly winter so far. And remember, last year was a cold one too. The chart on page one shows departures from average for some long-term stations for the past 2 years – and all I see are minuses.

During two such cold winters, it is lucky that some Auburn and Alabama fans were able to spend some time in Glendale, AZ, and Pasadena, CA.

Just for fun I checked the 15 winters in which an Alabama team has brought home the college football championship, and 9 of those had below average temperatures. For the last seven national championships brought home to Auburn or Tuscaloosa, beginning in 1965, all were won when Alabama had a colder than average winter.

Statewide, the coldest two winters in a row were 1976-77 and 1977-78. That record should survive this stretch: 1976-1977 was 1.9° F colder than 2009-10.

I think we are about due for a warm winter next year – based only on probability.
