

Title: The Verification The Verification of the Origins of Rotation in Tornadoes
EXperiment-Southeast (VORTEX-SE) UAH Dataset

Author: Preston Pangle (preston.pangle@uah.edu) and Kevin Knupp (PI:
kevin.kevin.knupp@nsstc.uah.edu)

Over the course of the ongoing VORTEX-SE project, The University of Alabama in Huntsville (UAH) has collected, and continues to collect, data from multiple platforms in support of the VORTEX-SE campaign. In an effort to supply datasets to the public in a timely manner, data from the campaign collected by UAH has been uploaded to this server.

This dataset contains most data gathered by the UAH platforms during the VORTEX-SE field Campaign. Datasets will become available as data is collected and processed. **The data provided is considered preliminary and contains no quality control. Datasets may undergo reorganization as more data is added.** Users are advised to take this into consideration when using the datasets.

Most of the datasets are organized into yearly project directories. Data from each year are then sorted by platform. Within the platform directories, data is then further sorted by IOP number. Each platform has an accompanying readme. The flow is described below:

If you do happen to find any errors and/or have any questions regarding the dataset, please contact me (Preston Pangle) at preston.pangle@uah.edu.
